

ELECTRICS

What does Electrics do?

Electrics ensures that all electrical systems in the car work reliably and efficiently. This team focuses on the power distribution, communication between components, and the seamless operation of sensors, actuators, and control units.

By designing, integrating, and testing these systems, Electrics helps the car perform consistently on track and supports every other subsystem in achieving its full potential.

If you enjoy working with electrical systems, problem-solving, and enabling high-performance technology to function flawlessly, Electrics is the place for you!

APPLY HERE!

Your Tasks:

- Craft and assemble the HV-Accumulator and HV-Electronics/HV-BMS
- Integrate inverter, charger and sensors (E-Package Design)
- Design and solder PCBs for control and monitoring systems
- Test and validate Hard- and Software
- Implement telemetry systems
- Assemble LV wiring harness and manage power supply

Requirements:

- Background in electrics and/or high-voltage electronics beneficial
- Interest in PCB design and layout
- Very good English communication skills
- Strong teamwork and collaboration abilities
- Independent, structured, and reliable working style
- Commitment and enthusiasm for the project
